

# Comprehensive Evaluation of System Response

- Identify gaps and uncertainties in system response —physical, chemical, biological, and socioeconomic— that impact efforts designed to attain WQS.
- Identify recent scientific developments that can shed light on the gaps and uncertainties in system response to advance efforts to attain WQS, and
- Recommend research strategies that improve understanding of system response to support informed decision making to attain WQS.
- Recommend strategies for integrating scientific and technical analysis with active adaptive management in order to aid decision-making under uncertainty (to achieve WQS).

# Public Policy

**Chesapeake Bay Agreement: Restoration Goals**

- Sustainable Fisheries
- Vital Habitat
- Water Quality**
- Toxic Contaminants
- Heathy Watershed
- Climate Resiliency
- Land Conservation
- Stewardship
- Public Access
- Environmental Literacy

**Enforceable Goal**

**Water Quality Standards**

**Designated Uses**

**Water Quality Criteria**  
Dissolved Oxygen, Water clarity/SAV, & Chl-a across 5 habitats

6	Striped Bass: 5-6	American Shad: 5
5	White Perch: 5	Yellow Perch: 5
4	Hard Clams: 5	Alewife: 3-6
3	Crabs: 3	Bay Anchovy: 3
2	Worms: 1

**TMDL: Stressor Reduction Goals**

**Targets:** Nitrogen, phosphorus, sediment loads to achieve water quality criteria

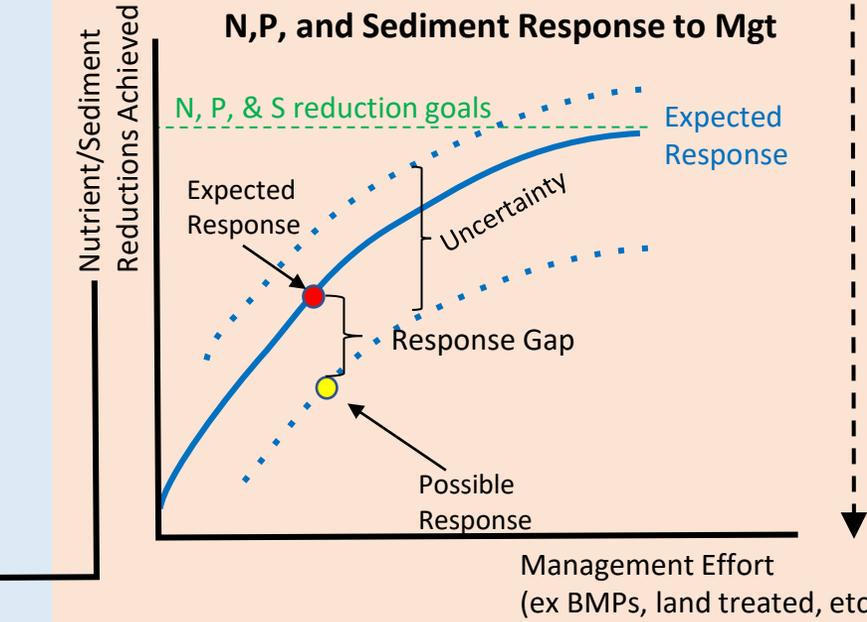

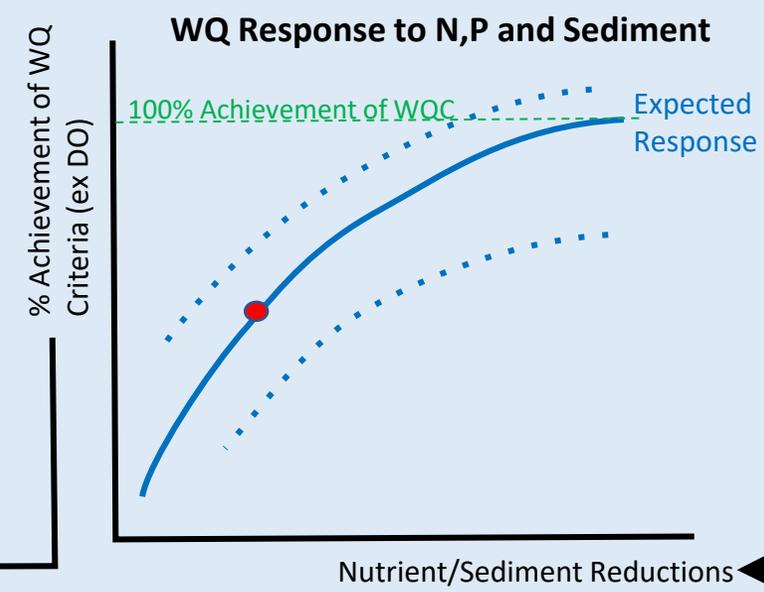

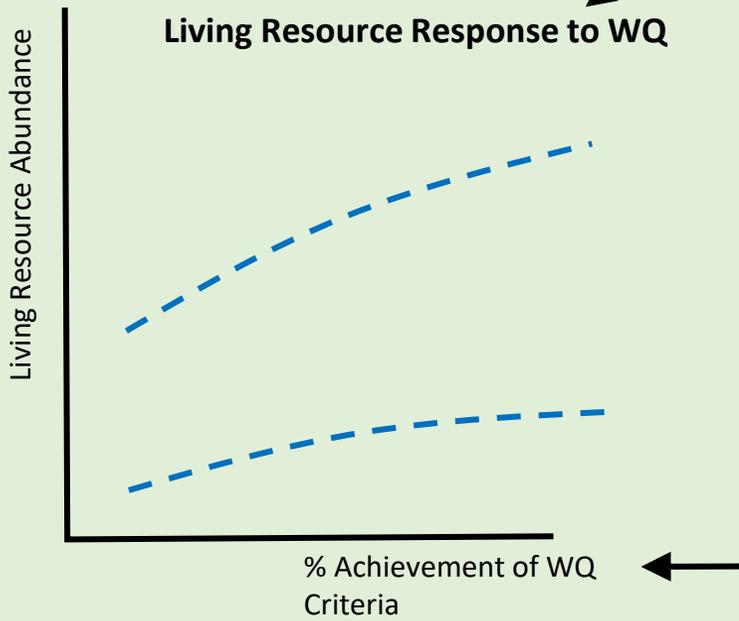

TN: 214.6 m/lbs/yr  
TP: 13.4m lb/yr  
TSS: 18,587m lb/yr

**Implementation Policy**

**Policies** designed to reduce stressors to achieve WQS.

# Biological, Physical, and Social System Response

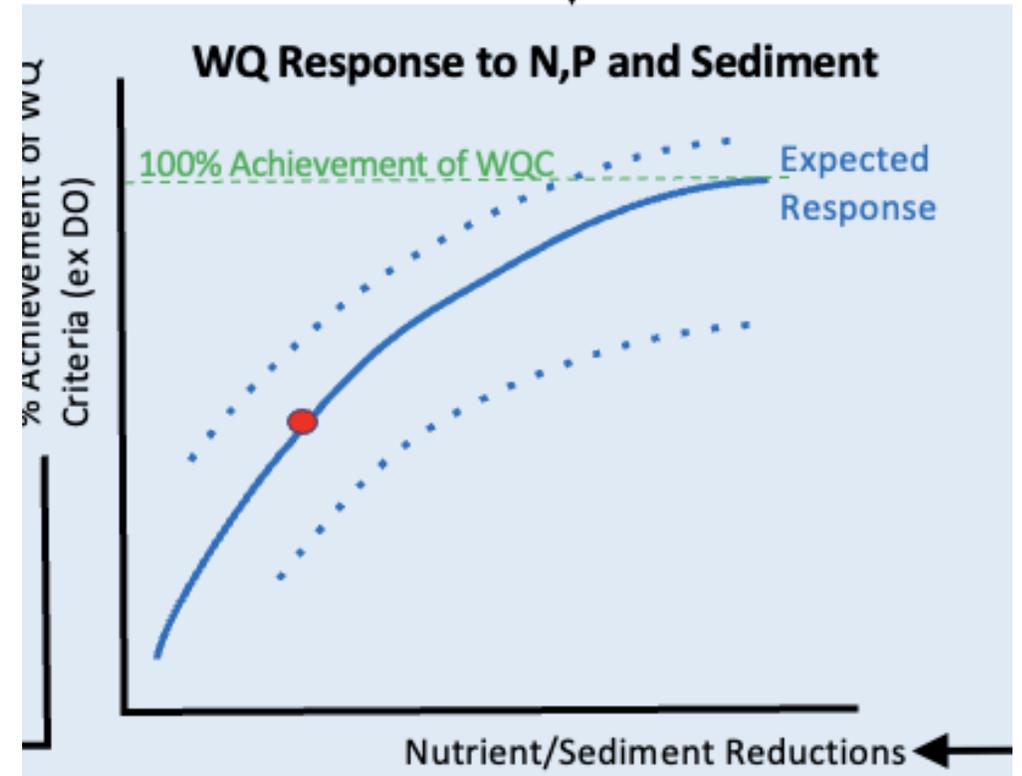

# Watershed Framing Questions

- Is the physical and social system responding to management efforts to meet TMDL N, P, and S goals in ways consistent with expectations?
- What are the major uncertainties in efforts to reduce N, P, and S stressors delivered to the Chesapeake Bay?
- What management actions/policy options could improve nutrient/sediment response or reduce response uncertainties? (see implications)

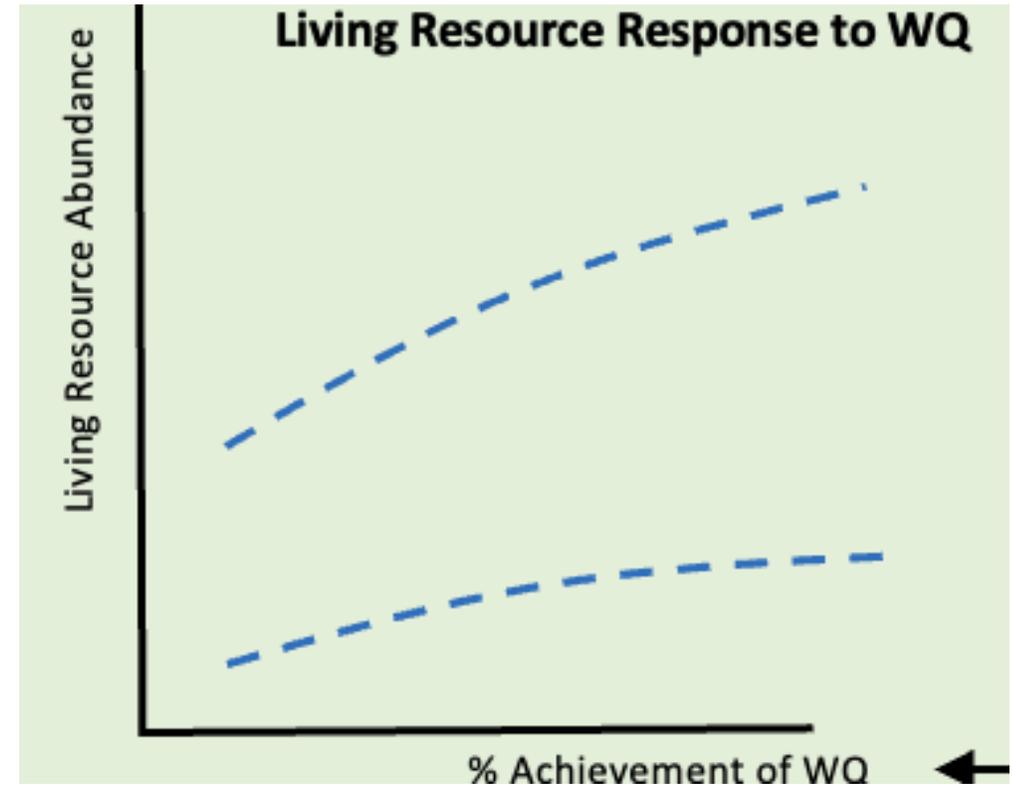

# Estuary Framing Questions

- Is estuary water quality responding in ways consistent with expected response to stressor reductions (N,P, & S) achieved to date?
- What are the major uncertainties in efforts to assess Bay water quality criteria (DO, water clarity/SAV, chl-a)?
- What are the major uncertainties in efforts to achieve Bay water quality criteria (DO, water clarity/SAV, chl-a)?
- What management actions/policy options could improve estuary water quality (criteria) response?

# Living Resource Framing Questions

- To date, how is the CBP assessing the response of LR to management actions designed to improve WQ and habitat? And how does this compare to other large-scale restoration programs?
- What are the challenges relating the response of living resources to current numeric water quality criteria and habitat actions, recognizing that living resource conditions are affected by changes in multiple factors?
- What can be done to improve confidence in understanding LR response to WQ conditions?
- What LR reflect or are responsive to WQ conditions? How can the analyses inform what types and magnitude of changes in water quality and habitat are needed to evoke an agreed-upon set of the desired living resources responses?

# Biological, Physical, and Social System Response

# Implications

- **Expand Adaptive Governance/Management.** The attainment of WQS will only get costlier and the effectiveness of nutrient/sediment investments more uncertain; therefore, the program must evolve beyond its current adaptive management approach.
- **Rethink Criteria.** Given what we've learned and the changing stressors on the Bay, it will be necessary to reconsider desired endpoints and/or reevaluate how they are defined. Defining and assessing criteria must be tightly linked
- **More Effective Implementation.** The existing NPS programs will be insufficient to meet TMDL goals. Both physical (BMP effectiveness) and social (behavioral change) aspects of implementation need revision to make substantial progress in reducing nonpoint source nutrient/sediment loads
- **Evaluate Tradeoffs/Allocate Resources Appropriately.** The TMDL operates in the context of a larger set of goals and a future of changing conditions; this implies that success will involve both a reflection on our goals as well as how we design our approach
