

Crosstabs**October 2020 University of Massachusetts Amherst/WCVB Poll of Massachusetts Likely Voters**

Field Dates:	October 14 – October 21, 2020
Sample:	713 Registered Voters in Massachusetts
Margin of Error:	4.5% for All Registered Voters

YouGov interviewed 725 registered voter respondents who were weighted to the sampling frame from the 2018 Current Population Survey (CPS) of Massachusetts registered voters using propensity scores. The 725 cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories). Finally, the sample was restricted to only those who are likely voters to produce a final dataset of 713 likely voter respondents and weights were re-centered among these 713 respondents to produce the final weight.
