University of Massachusetts Amherst
January 2024 National Poll

Field Dates: January 25, 2024 – January 30, 2024
Sample: 1064 Respondents
Margin of Error: 3.7%

YouGov interviewed 1064 respondents, none of whom were matched out to produce the final dataset. The unmatched cases were weighted to a sampling frame using propensity scores. The sampling frame is a politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The unmatched cases and the frame were combined, and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, region, and home ownership status. The propensity scores were grouped into deciles of the estimated propensity score in the frame, and then post-stratified according to these deciles. The weights were then post-stratified on 2020 presidential vote choice, as well as a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.
