May 2024 Massachusetts Poll**

Field Dates:	May 17 – May 30, 2024
Sample:	700 Respondents
Margin of Error:	4.4%

YouGov interviewed 741 respondents who were then matched down to a sample of 700 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a politically representative "modeled frame" of Massachusetts adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and own or rent. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2020 presidential vote choice as well as stratifications of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.
