

Crosstabs**February 2020 University of Massachusetts Amherst/WCVB Poll of African American Super Tuesday Registered Voters**

Field Dates:	February 19 – February 24, 2020
Sample:	500 Registered African American Voters in Super Tuesday States 431 Registered Democratic Voters 69 Registered Independent Voters
Margin of Error:	5.7% for All Registered Voters

YouGov interviewed 520 African American registered voters living in Super Tuesday states who were then matched down to a sample of 500 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, and education. The frame was constructed by stratified sampling from the full 2018 Current Population Survey (CPS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.

All figures presented in this document are for registered African American adults living in Super Tuesday states.
