

Crosstabs**February 2020 University of Massachusetts Amherst/WCVB Poll of Massachusetts Super Tuesday Registered Voters**

Field Dates:	February 18 – February 24, 2020
Sample:	400 Registered Voters in Massachusetts 202 Likely Democratic Primary Voters (Democrats) 198 Likely Democratic Primary Voters (Independents)
Margin of Error:	5.9% for All Likely Democratic Primary Voters

YouGov interviewed 450 respondents who were then matched down to a sample of 400 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education based on known characteristics of Democratic Party primary voters from the Massachusetts voter file and the 2018 Cooperative Congressional Election Study.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 Presidential Primary vote choice, and age x gender stratification of Democratic Primary voters from the Massachusetts voter file to produce the final weight.

All figures presented in this document are for registered adults who indicated that they are likely to participate in the 2020 Massachusetts Democratic presidential primary.
